## A small tutorial how to create an Asteroid belt.

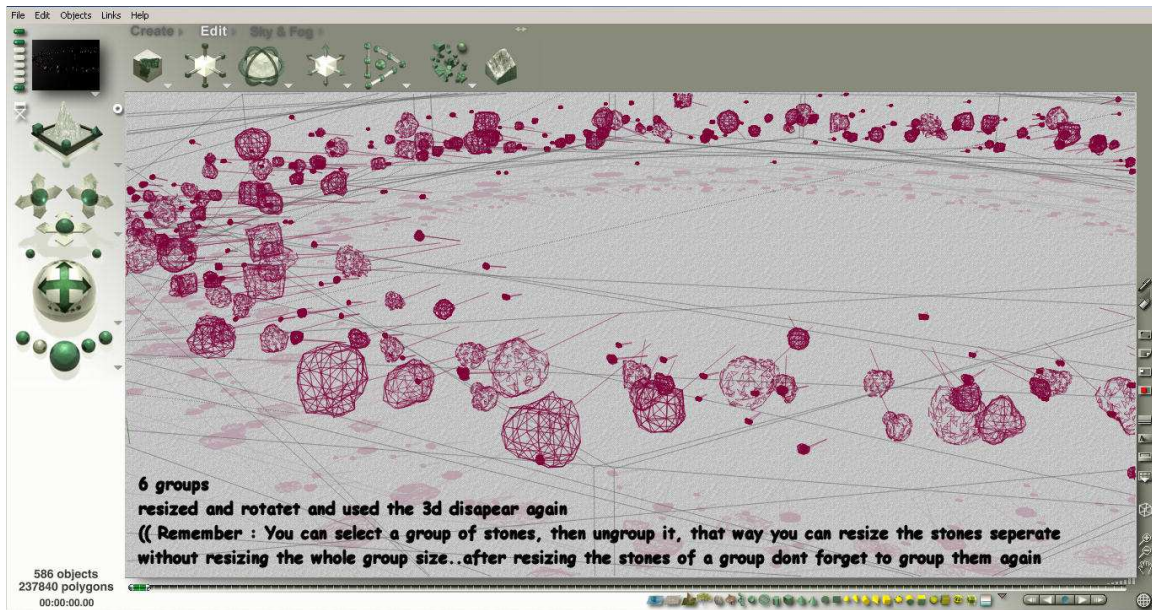

You may want to view this document zoomed to 300% size.

### Fun Method – but more elaborate

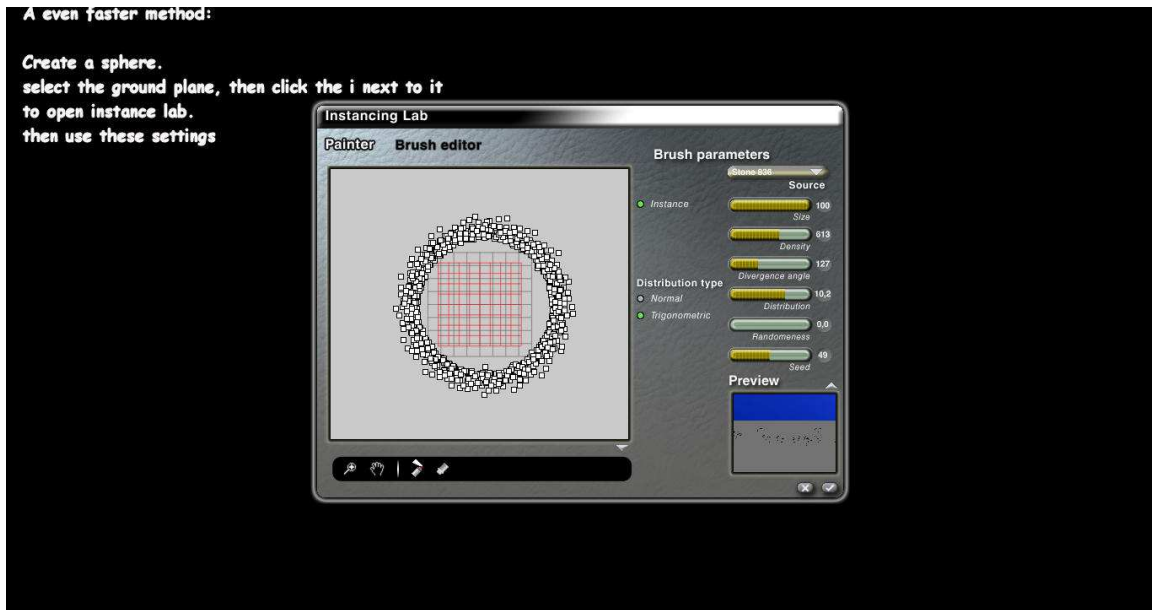

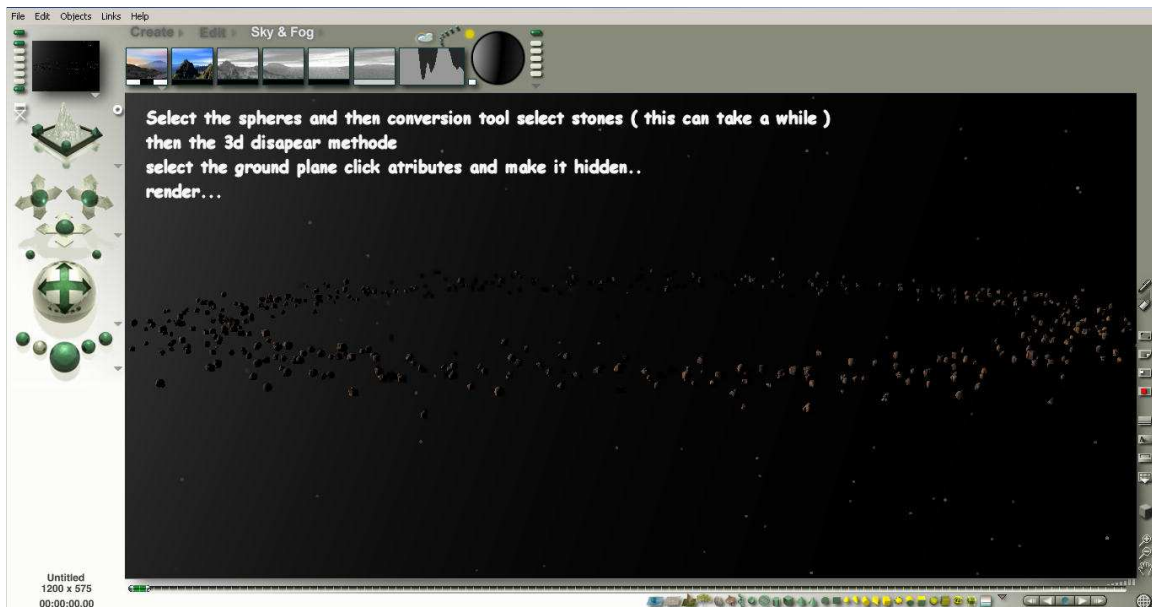

## An even faster method.

In fact you can forget the above tutorial (however it's also fun to do)

Then re-size the spheres if needed:

Like in the above tutorial you now can start copy this group as often you want and use the 3d disappear method to make it more random looking... as said The sky is the limit.... in this case, Space is the limit.. 😊
